INSIDER TA Crack +

• Equivolume Charting: Equivolume Charting, which renders up to four box-and-bar charts • Point & Figure Analysis: Charting pattern recognition that produces a unique signal. Also called 'Point and Figure Analysis', this charting technique uses the lines connecting two points to determine which one is the best buy and which is the best sell point. • Volume Scanning: Charting pattern recognition that displays the volume levels of each stock. • Stock Screening: As per the charting principle, stock screening allows you to check the value of each point, thereby giving you an overview of the stock. • Mean-reversion: Per the charting principle, mean-reversion analysis is a method that analyzes the period lengths between high and low price values and shows which is the best buy and sell point. • RSI (Relative Strength Index): The RSI calculates the number of positive and negative movements in a period of time to determine which period is the best buy point. • Box & Bar: Box & Bar chart is a tool that charts the high volume, low volume and average volumes of the price history. • Point & Figure Analysis: In the Point & Figure Analysis, the price line is divided by the number of candles, making it easier to see the price trend. Also called Point & Figure charting, this method is used to find the best buy and sell points. • Axis Alignment: This tool is applied when you want to use the charting results separately and in combination with each other. • Stretching & Compressing: Also known as panning, zooming or sliders, this tool allows you to pan, zoom and drag the chart manually.
